Heelift® brand boots are soft, latex-free foam boots designed to:

- Elevate the heel while lying down
- Protect the foot and ankle from injury due to pressure and friction
- Allow the patient to reposition as needed while Heelift® stays in place on the lower limb
- Easily customized for off-loading at-risk areas

Easy Application and Fit

1. Measure for correct sizing.
2. Thread straps through D-rings.
3. Secure the straps.
4. Check to confirm heel is off-loaded using heel opening.

Optional Customization

- Optional Anti-Rotation Wedge for Foot and/or Hip Rotation
- SCD with Heelift
- Achilles Tendon
- Foot Drop
- Malleolar Decubitus

Proper Sizing and Care
